# CONTROLLERS DATASHEET DF95 HSE/Profibus Controller 

# DF95 HSE/Profibus DP Controller with 2 Ethernet 100 Mbps ports, 1 serial port, 2 Profibus PA ports and 1 Profibus DP channel 

TECHNICAL INFORMATION

## Product Description

DF95 module is the Smar solution for Profibus applications Its main feature is working as Profibus DP-HSE gateway to provide power to the connectivity and flexibility to the system application. It allows wide communication between the Profibus DP and PA field devices. Through the HSE network and other DFI302 modules, it is possible the communication between field devices and other industrial protocols, providing greater flexibility to the control strategy projects. Through the I/O cards, it is also possible to execute discrete control via relay diagram logic ("Ladder Diagram"), allowing a single and integrated system. The module DF95 also can act as Modbus gateway (slave), allowing the interconnection of modules that are not fieldbus or HSE.

## Main Characteristics

Functionalities

- HSE Field Device
- Modbus Gateway (serial and TCP/IP)
- Ethernet connectivity

Technical Characteristics

- One Profibus DP channel supporting up to 12 Mbps;
- Two Profibus PA ports supporting up to 32 devices for channel;
- It supports up to 124 Profibus DP and PA field devices;
- It supports up to 3584 bytes of input and 3584 bytes of output during the data interchange process;
- Limit of 64 external links by the HSE network;
- Maximum of 250 function blocks per DF95;
- One (1) Flexible Function Block (counted into the 250 allowed blocks), with 242 linked parameters to interface between the discrete and continuous control.
- It supports up to 16 HART modules (DF116/DF117).

Available Memory

| Volatile Memory | 8 Mbytes |
| :--- | :--- |
| Non Volatile Memory |  |
| EEPROM | 4 Mbytes |
| Flash to the program | 1 kbyte |
| Flash to monitor | 4 Mbytes |
| Flash to EC1 (Profibus) | 2 Mbytes |
|  | *tt is kept by not rechargeable internal battery. |

## Continuous Control with Profibus

DF95 is a complete Profibus HSE controller with capacity to execute function blocks. Through the available SYSTEM302, Studio302 and Syscon configuration tools is possible to configure the DF95 totally.

## HSE Communication:

- Maximum of 512 link objects;
- Supervision up to 2000 points per second;

## Discrete Control

DF95 module also has the capability of access I/O cards through the IMB (Inter-Module Bus), present in the backplane where the DF95 is mounted. Through the IMB, up to 16 racks DF1A or DF93 can be interconnected, each one having up to 4 cards.

DF Line of I/O cards that can be used:

| Digital inputs and outputs |
| :--- |
| Analog inputs and outputs* |
| Temperature |
| Pulse counting |

The user program is developed using relay diagrams (IEC-61131-3), through the LogicView for FFB tool, available on System302. The LogicView for FFB is a complete development environment, allowing the user to create, edit, simulate and supervise the developed application. The interconnection with fieldbus is made through a flexible function block.

General Characteristics of the discrete control in the DF95:

| I/O Points* | 1024 discrete points or 512 <br> analog (maximum) |
| :--- | :--- |
| Ladder Function Blocks | 2000 blocks (maximum) |
| Configuration File | 120 Kbytes (maximum) |
| Program Execution Cycle <br> for 1000 boolean <br> operations (without <br> redundancy) | 50 ms (minimum)** <br> 90 ms (typical)*** |
| Program Execution Cycle <br> with redundancy | Increment of 10 ms <br> (typical)**** up to 50 ms <br> (maximum) to execution cycle |
| Execution Average Time | 5.8 ms/Kbytes of program <br> (minimum) <br> $10.5 \mathrm{~ms} /$ Kbytes of program <br> (typical) |

* The whole number of points includes inputs and outputs, analog or digitals. Maximum may change according I/O type used.
** 1131 Flexible Function Block adjusted to One (High Priority). Each 1000 boolean operations allocate 8.6 Kbytes.
*** Total execution time will change depending on the adjusted priority of 1131 FFB The adjustment should be compatible with the quantity of function blocks and HSE links. **** The whole execution time may change depending of the configuration file size.

The extensive library of LogicView for FFB function blocks allow the implementation of discrete and/or continuous control.

The complete list can be seen in the LogicView for FFB manual available on the Smar website.

The size of the configuration file and its time of execution can be estimated through a simple addition of the elements that compose the program. The total execution time will be given by the configuration execution time plus the program execution cycle, that is 10 ms .

## Redundant Operation

DF95 can operate in stand alone (one DF95) or redundant (two DF95) mode. In redundant mode, the two DF95s are capable to communicate through a proprietary channel and change information about configuration and operation status.

Some DF95 elements are redundant:

- HSE Block Redundancy
- HSE link Redundancy
- Ladder Redundancy
- Supervision Redundancy
- Ethernet Media Redundancy

Topology to interconnection of DF95s in redundancy:

Redundancy General Characteristics:
For redundancy of access in I/O cards, it is necessary the use of a special rack (DF78 or DF92). The two power supplies and the two DF95 must be mounted on this rack, in that order. The remaining modules can be interconnected as usually.

## Internal Battery

The DF95 has an internal battery that keeps the Real Time Clock (RTC) and its non volatile RAM (NVRAM) when there is lack of external supply. This battery can be either enabled or disabled, depending on the position of the switch 1 , in the back part of the DF95. To enable the battery, set the switch to 1 as shown in the following figure:

In this configuration, when there is lack of energy, the RTC and the NVRAM will be supplied by the battery, allowing the retention of all configuration data. In case of equipment storage, it is recommended that the battery is turned off (switch 1 in position OFF).

So, before fixing the DF95 module in the rack, be sure the switch 1 , which refers to the battery, is in the enabled position.

The Watchdog is a mechanism to detect if an important or high priority task stops in the controller.
So, be sure the switch 4, which refers to the Watchdog, is in the ON position.

Battery features:

| Type of battery | Battery Panasonic BR- <br> 2/3AE2SP - Lithium |
| :--- | :--- |
| Capacity | 1200 mAh |
| Devices maintained by the <br> battery | RTC and NVRAM |
| Minimum life span | 8 years (typical charge of <br> $17 \mathrm{uA})$ |
| Maximum life span | 49 years (typical charge of <br> $2.8 u \mathrm{~A})$ |
| Voltage | 3 V (subject to revision when <br> below 2.5 V ) |

## Communication Ports and Channels

Ethernet Port

| Communication rate | $10 / 100 \mathrm{Mbps}$ |
| :--- | :--- |
| Standard | IEEE 802.3u |
| Isolation | 150 Vrms |
| Operation Mode | Full-duplex |
| Connector | RJ45 with shield |

Modbus Port

| Communication Rate <br> (Maximum)* | 115200 bps |
| :--- | :--- |
| Standard | EIA-232 |
| Connector** | RJ12 with shield |
| Maximum Current*** | $0.5 \mathrm{~A} @ 3.3 \mathrm{~V}$ |

There is an increase in error rate as we increase the communication rate over 19200 bps. In many situations these errors can be acceptable and they are not noticed by supervision.
** Grounded to the rail used for fixing the rack in which the DF95 is installed
*** Internally protected by solid state fuse.

Redundant Port

| Maximum Communication <br> Rate | 115200 bps |
| :--- | :--- |
| Standard | EIA-232 |
| Connector* | RJ12 with shield |
| Maximum Current** | $0,5 \mathrm{~A} @ 3,3 \mathrm{~V}$ |

* Grounded to the rail used for fixing the rack in which the DF95 is installed
** Internally protected by solid state fuse.
Failure Relay

| Output type | Solid state relay, normally <br> closed (NC), isolated |
| :--- | :--- |
| Maximum Voltage | 30 VDC |
| Maximum Current | 200 mA |
| Overload Protection | Does not have. It must be <br> provided externally |
| Normal Operation | Open contacts |
| Failure Condition | Closed contacts |
| Maximum cable length <br> connected to the relay | 30 m |

Observation: The power supply for the load must not be from an external network (outside the panel).

IMB Bus

| Voltage | 5 VDC |
| :--- | :--- |
| Bus | 8 bits |
| Failure indication | Yes |
| Hot Swap | Yes |

Profibus DP Channel

| Rate | From 9,6 Kbit/s to 12 Mbits/s |
| :--- | :--- |
| Standard | EN 50170 and EN 50254 |
| Physical Layer | EIA RS-485 |
| Profibus Modem | EC1 (Hilscher) |
| Connector | M12 |

Profibus PA Channel

| Number of Channels | 2 |
| :--- | :--- |
| Communication Rate | 31.25 kbps |
| Standard | EN 61158 EN 50170 |
| Physical Layer | ISA-S50.02-1992 |
| MAU Type | Passive (bus not powered) |
| Isolation | 500 Vac |

Controller - Secondary Board

| FPGA | Changes CycloneIII |
| :--- | :--- |
| Storage Memory | 4 KB |
| Processor | NiosII |
| Running Memory | 1 MB |
| Clock | 85 MHz |
| Operating Voltage | 3.3 V for I/O, 2.5V for PLL, <br>  <br>  <br>  <br>  <br>  <br>  <br> 5 V for communication <br> channels. |

Card

| Power Supply Voltage | $5 \mathrm{~V}( \pm 5 \%$ of tolerance) |
| :--- | :--- |
| Typical Current | 750 mA |
| Real consumption | 2.75 W |
| Environment Air <br> Temperature | 0 to $60^{\circ} \mathrm{C}$ according to the <br> IEC 1131 standard |
| Storage Temperature | -20 to $80^{\circ} \mathrm{C}$ according to the <br> IEC 1131 <br> standard |
| Relative Humidity of the <br> Operation Air | $5 \%$ to $95 \%$ non-condensing |
| Cooling Mode | Air convection |
| Weight | 0.318 kg |
| Dimensions (H x W x D) in <br> mm | $149 \times 40 \times 138$ (without <br> enclose) |

## Electrical Certification

The DF95 was developed according to the specifications of the immunity tests applied to equipment in industrial installations, in accordance with the IEC61326:2002 standard. Certification data can be obtained on request.

Note: For most recent updates, please consult Smar website ww.smar.com

## Module Features:

Controller - Main Board

| CPU | Family ARM7TDMI |
| :--- | :--- |
| Bus | 32 bits |
| Architecture | RISC |
| Performance | 40 MIPS |
| CPU Cache | 8 kbytes |
| Clock | 40 MHz |
| DMA | 10 channels |
| Ethernet | MAC 10/100 integrated |
| Watchdog | Yes (200ms of cycle) |
| Operation Voltage | 3.3 V to I/O and 2.5 V for core <br> $(552 \mathrm{~mW})$ |
